

**Software Developer  
Junior Level  
(SaaS Web Backend Developer)  
DC Power Solutions**

**Objective:**

The role of the Jr. Software Developer at DC Power Solutions involves working with our development team to rework, update, maintain, manage and help us make our legacy system a useable SaaS product, using development industry best practices.

**Scope of Position:**

As our Jr. SaaS developer you will be expected to work with ego aside, hand-in-hand with, and as a peer of our UI/UX Front-end Designer and Graphic Designer. As a Jr. Backend Developer you will be responsible for ensuring our services are online, available and working for our clients to access. You will need to maintain secure logins, and define different levels of user access and demonstrate a willingness to learn, if you lack a skill set.

**Qualifications/Skills Required:**

- Working knowledge of ASP.NET 4.0+ with emphasis in C#, MVC, and bootstrap – developing in Visual Studio.
- Basic knowledge of T-SQL/SQL, Web Design, and IIS.
- 1-2 years of programming experience with formal training (Computer Science or related).
- Optional: SSRS report generation for web/PDF/email on-demand.
- Optional: Familiarity with Microsoft Dynamics GP and SalesPad.
- Responsive design for web/desktop, tablet, and phone devices.
- Excellent interpersonal office communication skills.
- Ability to problem solve and show great attention to detail.
- Professionalism: work well with team and management.
- Self-motivated, willingness to learn and research new technology.
- Initiative to provide best practice solutions and ideas.
- Can work independently and as an integral part of the development team.
- Portfolio/ projects demonstrating your programming experience.
- Work within traditional development Alpha/Beta/Production environments.

**Responsibilities:**

- Work with team to produce and maintain SaaS.
- Work within project deadlines.
- Keeping security in place to protect data.
- Communicate roadblocks and provide ideas/solutions.

- Code, test your programming, and debug.
- Develop software.
- Backup SaaS system and work with IT on system and DB architecture.
- Continual system updates.
- Ability to manage incoming bugs and new feature requests.
- Communicate with Dev team (UI/UX Design, Graphic Design, Q/A, Scrum Master).
- Be willing to handle your own Q/A prior to secondary review.
- Work with UI/UX and stakeholders on best system solutions.
- Assist with analytics, and system usage data.
- Willingness to work hand-in-hand with front-end UI Design.
